EPFL Mathematics and Financial Engineering. Twelve months building systematic signals and production Python pipelines on commodity markets, now running my own cross-commodity data platform. Looking to apply both to quantitative research and trading.

French **native** • *English* **C1** • *German* **B2** • *Spanish* **B1** • *Arabic* **A2** • *Italian* **A1**

Work Experience

- **Commodity Data Platform** (personal project) 09.2026 – Present
  - Building solo a **research data platform** in Python: monthly customs trade flows for **168 countries** harmonised to HS2022, plus **9M+ fundamentals observations** (USDA, EIA, JODI, Ember, IAI).
  - Built a **dashboard to answer market questions from the data**: who produces, exports and imports a given commodity (e.g. zinc). Next: **LLM agents** for on-demand fundamental analysis.
- **Dnext Intelligence**, Morges, Switzerland
  Market Analyst, Fertilizers (Urea) 02.2026 – 08.2026
  - Built and ran a **production Python pipeline** (customs feeds, vessel lineups, production monitors) feeding price forecasting models, monitored live and re-estimated as regimes shifted.
  - Read **futures curves, calendar spreads and options** (term structure, implied volatility, positioning) to infer what the market had already priced in, and quantified where it looked wrong.
  - Owned a **recurring market outlook** delivered on a fixed cadence to trading clients: took a directional view on price, put it in writing, and answered for it afterwards.
- **Dnext Intelligence**, Morges, Switzerland
  Market Research Analyst, Grains & Oilseeds 09.2025 – 02.2026
  - Built a **rule-based systematic signal framework** in Python: statistical seasonality and quantile distributions over 20-year histories across flat prices, calendar spreads and cross-asset ratios, backtested, then shipped weekly with the rules fixed ex ante.
  - Rebuilt **cash-futures delivery economics** from scratch to price the physical-versus-futures arbitrage, as a repeatable tool.
- **Dnext Intelligence**, Morges, Switzerland
  Demand Forecasting Intern (master's thesis) 03.2025 – 08.2025
  - Forecasted Brazilian ethanol demand with **ML and time series models** (gradient boosting, ARIMA, Prophet), benchmarked out-of-sample; converted to a full-time analyst role.

Education

- **École Polytechnique Fédérale de Lausanne (EPFL)**, Lausanne, Switzerland
  MSc in Financial Engineering, thesis on forecasting ethanol demand in Brazil 09.2023 – 10.2025
  - Notable coursework: Advanced Derivatives, Quantitative Risk Management, Time Series Analysis, Financial Big Data, Machine Learning in Finance, Multivariate Statistics
  - Degree awarded 04.10.2025.
- **École Polytechnique Fédérale de Lausanne (EPFL)**, Lausanne, Switzerland
  BSc in Mathematics, project in differential topology 09.2020 – 06.2023
  - Strong foundations in probability, statistics, optimization and mathematical modelling.

Skills

- **Quantitative:** time series, econometrics, quantile & distributional modelling, backtesting, ML (gradient boosting, ARIMA)
- **Derivatives & risk:** option pricing & Greeks, implied volatility, calendar spreads, VaR, expected shortfall
- **Programming:** Python (expert), C++, R, Matlab, SQL; pandas, numpy, scikit-learn, Git, Bloomberg
- **Commodities:** supply-demand balances, trade flows, physical-versus-futures arbitrage, curve structure

Hobbies

- **Overland trading expedition:** Sourced vehicles in Switzerland, drove overland to West Africa and negotiated sales across local markets
- **Trading Games:** 3rd place out of 500+ participants, with 350% return in one month
- **Sailing:** Optimist and Laser in Regional & National competitions, Kitesurfing on holidays
- **Other Interests:** Mathematics, physics, philosophy, history, economics, geopolitics, cooking, drums
